

Electronic Solutions, Inc. Launches Smartphone System for RQ Network Control

New solution enables network control from Smartphones and Tablets.

Lafayette, CO — 11.15.2011 — [Electronic Solutions, Inc.](#), North America's leader in the manufacturing of intelligent motor controls for automated lifestyles, has launched a smartphone solution that enables smart mobile devices to control networks built on ESI's popular Remotely Queryable (RQ) protocol.

To develop this innovative solution, ESI has partnered with iRule LLC, provider of the popular iRule application that turns Apple's iPhone, iPad, or iPod touch, and soon Android devices, into a powerful universal remote control. ESI's SMART PHONE LAN and SMART PHONE WIFI bundle packages consist of hardware that will translate communication from smart devices to ESI RQ based devices. The package is built around Global Caché's award-winning iTach product, which physically connects WiFi or wired TCP/IP networks to serial ports (RS232) so that the RQ devices can be monitored, accessed, and controlled from iRule's remote control app.

"This is a solution many of our customers have been asking for," explains ESI's sales manager Jere Gianola. "By partnering with experts in their respective fields, ESI is able to adapt our renowned RQ network to meet the usability needs of the consumer today. It's a simple system. Set up the iTach, download the iRule app and map out the network. Control at your fingertips from a device that most people already own."

ESI's SMART PHONE LAN and RQ Bridge LON products are now shipping. For more information, please visit ESI's website, www.elec-solutions.com, or call Jere Gianola and John MacKenzie at 303-469-9322.

About Electronic Solutions, Inc.

Electronic Solutions, Inc. (ESI) is the leading producer of intelligent motors and motor controls for motorized products. ESI pioneered motor control technology with an array of versatile products for motorized window coverings, projection screens, retractable awnings, rolling shutters, and exterior solar protection products. ESI controls provide simple and scalable integration into automation systems, offering flexible control of virtually any motorized product -- on projects of any size.

Headquartered in Lafayette, Colorado, U.S.A., ESI is a division of Hunter Douglas. For more information on ESI and our products and solutions, please visit our website at <http://www.Elec-Solutions.com> or call us at 303-469-9322.

About iRule, LLC

iRule, LLC is the developer of the popular iRule software application that turns Apple's iPhone, iPad, or iPod touch, and soon Android devices, into a powerful, easily-personalized universal remote control for home entertainment and automation. iRule's remote interface is easily customized to fit user preferences, and is simply updated to control new components or to upgrade to the latest models of smartphones and tablets, making it the last remote you'll ever need.

The company has already sold thousands of units in 39 countries, and provides supporting software and services to ensure a solution that's cost-effective, simple to set up, and easy to use. Visit www.iruleathome.com for more information.
